

# Add Keys to Github/Gitea

## Github

1. [Settings](#)
  2. [SSH and GPG keys](#)
  3. New GPG Key
  4. Paste in the public key block
  5. Add GPG Key
  6. Turn on Vigilant mode
- 

## Gitea

1. [Settings](#)
2. [SSH / GPG Keys](#)
3. Add Key
4. Paste in the public key block
5. Add Key
6. Verify

## Screenshot:

A terminal window with a dark background. The prompt is 'echo'. The command 'gpg -a --default-key [redacted] --detach-sig [redacted]' is entered. The output shows 'gpg: using [redacted] as default secret key for signing' followed by a large redacted block of text. The terminal output ends with '-----END PGP SIGNATURE-----'.

```
echo [redacted] | gpg -a --default-key [redacted] --detach-sig [redacted]
gpg: using [redacted] as default secret key for signing
-----BEGIN PGP SIGNATURE-----
[redacted]
-----END PGP SIGNATURE-----
```
