

Add Keys to Github/Gitea

Github

1. Settings
 2. SSH and GPG keys
 3. New GPG Key
 4. Paste in the public key block
 5. Add GPG Key
 6. Turn on Vigilant mode
-

Gitea

1. Settings
2. SSH / GPG Keys
3. Add Key
4. Paste in the public key block
5. Add Key
6. Verify

Screenshot:

A terminal window screenshot showing a GPG signature process. The terminal title bar includes the name 'echo' and the command 'gpg -a --default-key [redacted] --detach-sig'. The output shows 'gpg: using [redacted] as default secret key for signing' followed by '-----BEGIN PGP SIGNATURE-----'. A large red rectangular area obscures the main content of the signature. At the bottom, it shows '-----END PGP SIGNATURE-----'.

```
echo | gpg -a --default-key [redacted] --detach-sig
gpg: using [redacted] as default secret key for signing
-----BEGIN PGP SIGNATURE-----
[redacted]
-----END PGP SIGNATURE-----
```
